CS5373-Class Practice4-Fall2022

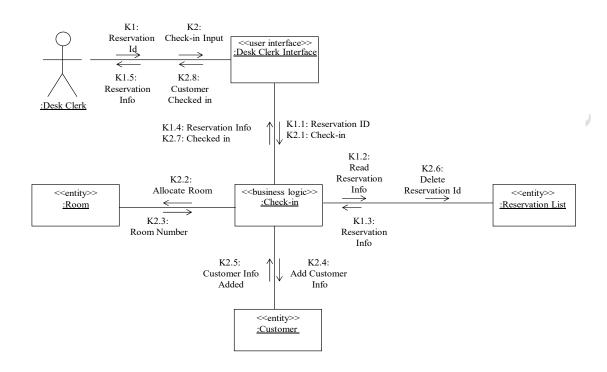

Develop the software architecture for a hotel information system, which provides reserve room and check-in use cases depicted below using the communication diagram. Develop software architecture in the following order:

- 1. Develop the consolidated communication diagram by merging all communication diagrams into a consolidated communication diagram that shows all objects and their interaction.
- 2. Determine the hotel information system's subsystems (or components) and depict them on the consolidated communication diagram.
- 3. Develop the software architecture diagram that shows subsystems and their interaction.

Collaboration Diagram for Reserve Room use case

Communication Diagram for Check-in use case

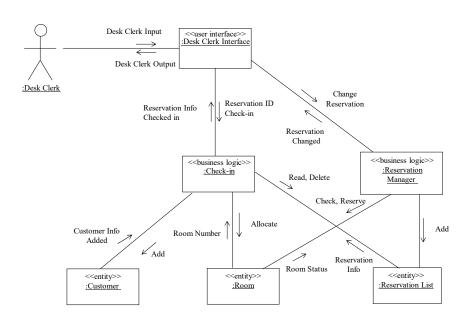

Rubric:

2 pts if students attended it.

3 pts for your judgment (1 pt for each question)

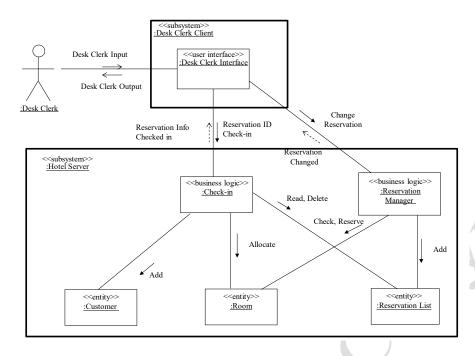

Key:

Consolidated Communication Diagram

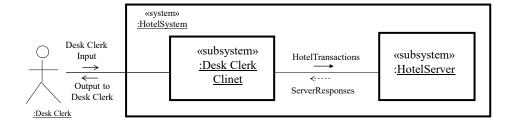

2b)

Subsystems and Message communication /function calls

2c)

Software Architecture
